Number Relationships: Taking Away

Teacher: So today we're going to learn to count to 10. We're also going to learn how to add numbers together onto our tree. And we're also going to be taking away, or subtracting, numbers with our tree. Okay? That's the big words, add and subtract. All right, so now everybody's going to get a turn to spin. And then we're going to do what's on the spinner. Go ahead, Dustin. So how many cherries are you putting in your basket?

Dustin: One, two, three, four.

Teacher: All right, so pick four cherries off your tree and put them in your basket. Just four. Can you count four?

Dustin: One, two, three, four.

Teacher: Four. How many cherries do you have left?

Dustin: One, two, three, four, five, six.

Teacher: He has six cherries left. All right, this is his turn. Cooper, what's your plan?

Cooper: It's -- It's three.

Teacher: Three. So how many oranges are you putting in your basket?

Cooper: Three. Teacher: Three.

Cooper: One, two, three.

Teacher: So you took away three oranges. How many oranges does that leave on your tree?

Cooper: One, two, three, four, five, six, seven.

Teacher: Yeah. So he had ten oranges, he took away three, he has seven left.
